

FSC National Risk Assessment

for the Russian Federation

DEVELOPED ACCORDING TO PROCEDURE FSC-PRO-60-002 V3-0

Version	V3-0
Code	FSC-NRA-RU
National approval	National decision body: Coordination Council, Association NRG Date: 20 September 2021 Except indicator 2.1 (revised by FSC International through application of FSC-ADV-60-002-01).
International approval	FSC International Center, Performance and Standards Unit Date: 08 March 2022 This risk assessment has been revised according to FSC-ADV-60-002-01.
International contact	Name: Tatiana Diukova E-mail address: t.diukova@ru.fsc.org
Period of validity	Date of approval: 08 March 2022 Valid until: (date of approval + 5 years)
Body responsible for NRA maintenance	FSC Russia, mail@fsc.ru , t.diukova@ru.fsc.org

Risk designations in finalized risk assessments for the Russian Federation

Indicator	Risk designation (including functional scale when relevant) ¹
Controlled wood category 1: Illegally harvested wood	
1.1	Low risk
1.2	Specified risk
1.3	Low risk
1.4	Specified risk
1.5	Specified risk
1.6	Low risk
1.7	Low risk
1.8	Specified risk
1.9	Specified risk
1.10	Specified risk
1.10a	Specified risk for Belgorod, Bryansk, Voronezh, Kaluga, Kemerovo, Kurgan, Kursk, Lipetsk, Novosibirsk, Orel, Penza, Ryazan, Sverdlovsk, Tula, Ulyanovsk and Chelyabinsk oblasts, Krasnoyarskiy and Altai kraises and the Republic of Altai Low risk for other subjects of the Russian Federation
1.11	Specified risk
1.12	Specified risk
1.13	Not applicable
1.14	Not applicable
1.15	Specified risk for the regions where indigenous peoples are present (see Annex 3.1). Low risk for the rest of the country.
1.16	Low risk
1.17	Specified risk
1.18	Low risk
1.19	Low risk
1.20	Specified risk for Amur and Sakhalin oblasts, Zabaikalskiy, Primorskiy and Khabarovskiy kraises. Low risk for all other Federal Subjects.
1.21	Not applicable
Controlled wood category 2: Wood harvested in violation of traditional and human rights	
2.1	Specified risk
2.2	Specified risk for the rights for freedom for association and collective bargaining, compulsory or forced labor, gender discrimination, and racial discrimination. Low risk for child labour.
2.3	Specified risk for the regions where indigenous and traditional peoples are present (see Annex 3.1) Low risk for the rest of the country.
Controlled wood category 3: Wood from forests where high conservation values are threatened by management activities	
3.0	Low risk

¹ See the body of the risk assessment for detailed risk indications for sub-indicators.

3.1	Specified risk
3.2	Specified risk
3.3	Specified risk
3.4	Specified risk
3.5	Specified risk
3.6	Specified risk
Controlled wood category 4: Wood from forests being converted to plantations or non-forest use	
4.1	Low risk
Controlled wood category 5: Wood from forests in which genetically modified trees are planted	
5.1	Low risk

1 Background information

The National Risk Assessment regarding controlled wood for the Russian Federation (NRA) was developed by FSC Russia (FSC Russia functions are performed by Association NRG) for FSC-certified organizations willing to purchase wood from non-certified suppliers for subsequent use of this wood declared as FSC Controlled Wood.

The NRA Working Group followed the requirements of FSC-PRO-60-002 V3-0 *The Development and Approval of FSC National Risk Assessments*, FSC-PRO-60-002a V1-0 *FSC National Risk Assessment Framework*, FSC-STD-40-005 V3-1 *Requirements for Sourcing FSC Controlled Wood* and referred to decisions of the VII General Assembly of FSC Russia (11-14 April 2016), findings of the Centralized National Risk Assessment (CNRA) for approved CW categories 2 and 5, consultations with experts and comments received during two public consultations on NRA drafts.

Regarding risk assessments in NRA and CNRA, risk assessments for all indicators from the 2 and 5 CW categories approved by FSC International (indicators 2.1, 2.2, 2.3, 5.1) are the same except indicator 2.2.c *Child labor*. While in NRA risk related to migrant workers discrimination is assessed as specified and set for the whole country, in CNRA it is applicable only to 9 subjects of the Russian Federation (subject of the Russian Federation is a constituent entity of the country).

NRA development is done according to a timeline confirmed by the Coordination Council of FSC Russia:

2015	May	establishment of the NRA Working Group, collection of information
	September	development of the first NRA draft
2016	February	evaluation of the first NRA draft by PSU of FSC International Center (FSC IC), feedback analysis, NRA update
	December	first public consultation
2017	March	feedback analysis, development of the second NRA draft
	July	second public consultation
	September	feedback analysis, development of the final NRA draft
2018	June	evaluation of the final NRA draft by PSU of FSC International Center, feedback analysis, final NRA draft update
	December (end)	NRA approval

The NRA was developed by the NRA Working Group (NRA-WG), which is represented by the Technical Committee of FSC Russia. All members of the NRA-WG possess thorough knowledge about FSC, FSC normative documents, forestry and related national features. NRA-WG is established on a chamber-balanced basis with minimum 3 members from each chamber: environmental, social and economic. The NRA for all 5 categories of FSC controlled wood passed the approval process within the NRA-WG and was agreed by its members. The NRA was approved by the FSC Russia Coordination Council.

Table 1. Members of the NRA Working Group (names in *italics* are members of the NRA-WG who took part in the NRA development, but left the NRA-WG by the date of the document approval).

Full Name	Qualifications	Contact details
Environmental Chamber		
Aleksey Aleynikov (from April 2016) - individual member of FSC Russia	Experience in forestry, scientific research, development of normative documents	aaacastor@gmail.com
Konstantin Kobayakov - WWF Russia, member of FSC Russia - individual member of FSC Russia	Experience in all applied aspects related to the development of the standard	kkobayakov@wwf.ru
Anna Nemchinova - individual member of FSC Russia	Experience in forestry, scientific research, development of normative documents	nemanvic@rambler.ru
Mikhail Karpachevsky (until April 2016) - Transparent World non-profit partnership, - individual member of FSC Russia	Expert in sustainable forest management, HCV mapping, biodiversity conservation. Significant experience in development of FSC national standards. From 2005 to 2010 – Chairman of the FSC Russia Coordination Council	mlvovich@yandex.ru
Economic Chamber		
Alexey Shorokhov (until August 2019) - OOO IKEA Industry Tikhvin - Inter IKEA Group	Practical experience in forest certification management at the company level	alexey.shorokhov@ikea.com
Artyom Zagryadskov (from December 2016) - OOO Stora Enso Forest West	Practical experience in forest certification management at the company level, group manager	Artyom.Zagryadskov@storaenso.com
Elena Piankova (until August 2019) - OAO Ilim Group	Responsible for FSC-certified forest in the company. Practical experience in forest certification management at the company level	elena.piankova@ilimgroup.ru
Mikhail Kopeykin (December 2016 – November 2017) - Titan Group	Practical experience in forest certification management at the company level	kopeykin@titans.su
Aleksander Druzhinin (April 2016 – December 2016) -Tikhvin Complex Logging Enterprise, ZAO International Paper	Practical experience in forest certification management at the company level	Aleksandr.Druzhinin@ipaper.com
Olga Rogozina (until April 2016) - Aop Stora Enso, Forest Sector Russia	Practical experience in forest certification management at the company level, including experience in group certification	olga.rogozina@storaenso.com
Olga Nesterova (from August 2020) - JSC "Solikamskumprom".	Practical experience in forest certification management at the company level	olga.nesterova@solbum.ru

Anton Studencov (from August 2020) – OOO Region-Les	Practical experience in forest certification management at the company level	studencov_a@regionlesm.ru
Social Chamber		
Antonina Kulyasova (from May 2016) - individual member of FSC Russia	Practical experience related to social aspects of forest certification, including engagement with peoples maintaining a traditional lifestyle, consulting in social aspects of FSC.	antonina-kulyasova@yandex.ru
Albert Loginov - individual member of FSC Russia - head of indigenous community “Udorachi”	Engagement with local communities and local activists, including indigenous peoples	loginova_elena_428@mail.ru
Nadezhda Efimova (from December 2016) - individual member of FSC Russia	Practical experience related to social aspects of forest certification, including engagement with local communities and small forest businesses, consulting in FSC issues	n.efimova@list.ru
Nadezhda Strakhova (until 2016) - individual member of FSC Russia	Practical experience related to social aspects of forest certification at the company level	pbr2006@mail.ru
Valeria Moreva (from April to December 2016) - individual member of FSC Russia	Practical experience related to social aspects of forest certification, work at the Center for Independent Social Research, consulting in social aspects of FSC	stimulus_spb@mail.ru
Marina Severenchuk (Koroleva) (until April 2016) - individual member of FSC Russia	Practical experience related to social aspects of forest certification at the company level, including engagement with local communities and indigenous peoples	marina.koroleva@mondigroup.com
Aleksandr Arbachakov - individual member of FSC Russia - a representative of the Shors (a group of indigenous peoples of the Gornaya Shoria region).	Engagement with local communities and local activists, including indigenous peoples	arbachakov@gmail.com

2 List of experts involved in risk assessment and their contact details

At different stages of the NRA development experts were involved in drafting NRA and providing initial consultations and comments.

Table 2. Experts involved in risk assessment

Categories 1, 4 and 5		
<i>Experts involved in NRA drafting</i>		
Aleksey Kuritsin	Vice Director of OOO Lesexpert	a@kuritsin.ru +7 909 9999970 Skype: kuritsin

<i>Experts consulted during NRA development</i>		
Alexey Yaroshenko	Head of the Forest Department, Greenpeace Russia	alexeyyaroshenko@gmail.com

3 National risk assessment maintenance

FSC Russia will follow up on the relevance of information in the NRA and if necessary initiate revisions and updates of the document.

Controversial issues and NRA revision are considered by the NRA-WG² with the final approval by the Coordination Council of FSC Russia.

² Within FSC Russia NRA-WG is represented by Technical Committee, which carries out all the duties for national standard development, national interpretations and other technical issues related to standard setting

4 Complaints and disputes regarding the approved National Risk Assessment

Any person or organization can submit a complaint regarding the national risk assessment.

1. Complaints regarding the approved NRA shall be prepared in writing and submitted to FSC Russia by e-mail or post. A complaint shall include the complainant's name, contact details, the complaint description and the actions demanding by the complainant.
2. FSC Russia confirms the receipt of the complaint in written form within two (2) weeks.
3. The NRA-WG examines the complaint within 30 calendar days. In case when additional information is required and requested, the period of complaint examination may be extended to 60 calendar days.
4. The decision on the complaint is taken by the NRA-WG on consensus basis of representatives of all three chambers: environmental, social and economic.
5. The complainant shall be informed in writing about the decision of the NRA-WG no later than 31 days from the time when the complaint receipt is confirmed by FSC Russia. If the period of the complaint consideration is extended, FSC Russia informs the complainant about it within the first 30 days. The final decision shall be passed to the complainant no later than 61 days from the time when the complaint receipt is confirmed by FSC Russia.
6. In case the complainant is dissatisfied with the decision of the NRA-WG, he/she may submit the complaint to the Coordination Council of FSC Russia. The Coordination Council shall confirm the receipt of the complaint within two (2) weeks and provide the complainant with the decision in writing within 30 days from the date of the confirmation of the complaint receipt.
7. In case the complainant is dissatisfied with the decision of the Coordination Council, he/she can follow the procedure FSC-PRO-01-008 V2-0 "Processing Complaints in the FSC Certification Scheme" for further complain submission.
8. All complaints regarding the approved NRA are registered in the NRA Complaint Register of FSC Russia. Information in the Register includes complaint informer's name, date of complaint receipt and complaint closure, its brief description, outcome of evaluation by the NRA-WG and, if applicable, by the Coordination Council, and actions undertaken by the NRA-WG / Coordination Council.

5 List of key stakeholders for consultation

This section provides the list of key stakeholders specifying those who were invited to take part in NRA consultations and who participated in it.

Environmental interests	WWF Russia, Greenpeace Russia, Russian Bird Conservation Union, mailing list of all stakeholders registered in FSC Russia, mailing list of all environmental chamber members of Association NRG
Social interests	Unions/organizations of indigenous peoples (Komi, etc.), Russian Union of Forest Industries Workers, FSC consultants on social issues ³ , mailing list of all stakeholders registered in FSC Russia, mailing list of all social chamber members of Association NRG
Economic interest	IKEA TORG, ILIM Group, Mondi Syktyvkar, Stora Enso Forest West, International Paper, Russian Forest Group, FSC consultants mailing list, mailing list of FSC certificate holders in Russia, mailing list of all economic chamber members of Association NRG
General	Federal Forestry Agency of the Russian Federation, FSC-accredited certification bodies working in Russia

6 List of abbreviations and Russian transliterated terms* used

CITES – the UN Convention on International Trade in Endangered Species of Wild Fauna and Flora

CNRA – Centralized National Risk Assessment for FSC controlled wood

DDS – due diligence system

EGAIS (Russian 'ЕГАИС') – Unified State Automated Information System of wood flow records and transactions

HCV – high conservation value

HCVF – high conservation value forests

³ The list of registered with FSC Russia consultants is available on <https://ru.fsc.org/ru-ru/cert/consult>

Lesnichestvo (Russian 'лесничество') – state district-level forest management unit

Lesokhozyaystvennyy reglament (Russian 'лесохозяйственный регламент') – forest management regulations of a district-level forest management unit

MIPR – minor indigenous peoples of Russia

N/A – not applicable

NGO – non-governmental organization

NRA – National Risk Assessment for FSC controlled wood

NRA-WG – NRA Working Group

OHS – occupational health and safety

OZU (Russian 'ОЗУ' / 'особо защитные участки леса') – special protection forest sites

RF – the Russian Federation

* the list of Russian transliterated terms is only included in the English version of NRA

7 Risk assessments

Area under assessment: Russian Federation

The National Risk Assessment for controlled wood is done for the whole Russia. In most cases in Russia, wood is harvested in forests of the Forest Fund lands, Defense and Security lands, and only minor volumes on the lands of Protected Nature Areas. The Russian law in full scope describes wood harvesting and usage. Competent bodies of the subjects of the Russian Federation⁴ are in charge of the Forest Fund management.

Aside from the the Forest Fund, Defense and Security, and Protected Nature Areas lands, there are forests located on agricultural lands, which are partly designated for protection of lands from negative (adverse) natural, anthropogenic and industrial impacts. Alongside with forests on agricultural lands, agriculturally used areas have a high share of lands overgrown with trees and shrubs due to a long non-use period. According to expert assessments, the area of such lands overgrown with trees may be more than 40 million ha⁵. These lands cannot be transferred to the forest fund and are regulated by the Law on the Turnover of Agricultural Land (Annex 2.1 (6)). Forest planning and forest management are not carried out for such forests. The present legislation does not yet regulate harvesting operations, purchase and sale of such wood. **Therefore, for the time being the wood from agricultural lands overgrown with trees is not considered as controlled wood within the FSC certification scheme and is not considered in this document. The same applies to lands designated for industries, power production, transport, communications, radio broadcasting, television, computer science, space activities and other special purposes.** In case of amendments in respective laws and regulations, decision on the use of wood from agricultural lands overgrown with trees as controlled wood will be reviewed and relevant amendments will be made to the NRA.

This risk assessment is based on information from open sources, including scientific and NGO reports, media publications, regulatory frameworks and consultations with experts.

The risk designation for each indicator is based on the gathered information tested against 'thresholds' – conditions for which compliance or non-compliance gives the basis for determining the type of risk. There are thresholds that, when met, result in low risk designation, and there are thresholds that, when met, result in a specified risk designation. The thresholds are specified in FSC-PRO-60-002a V1-0 *FSC National Risk Assessment Framework*, FSC-STD-40-005 V3-1 *Requirements for Sourcing FSC Controlled Wood*.

Control measures are developed for indicators with specified risk. Effective implementation of control measures decreases the risk of purchasing unacceptable wood by certified organizations to low risk. If implementation of control

⁴ A subject of the Russian Federation is its constituent entity. The Russian Federation consists of 85 subjects: 22 republics, 3 cities of federal importance, 9 krais, 1 autonomus oblast, 46 oblasts, and 4 autonomus okrugs (as of August 2018).

⁵ Shmatkov, N. The possibility to grow forest on agricultural lands will increase investment flows in silviculture// Forest Industry E-journal — December 2016, No.12 (104)

http://www.lesindustry.ru/issues/li_104/Vozmozhnost_viraschivat_les_na_selhozpolyah_uvelichit_pritok_investitsiy_v_lesnoe_hozyaystvo_1377/

measures does not help to lower the risk, wood cannot be purchased as controlled wood and used within the FSC system.

Some control measures are mandatory for implementation, some are recommended. Implementation of control measures will be verified by FSC accredited certification bodies during audits. However, it shall be taken into account that control measures included in this NRA shall not be considered by FSC certificate holders as exhaustive. It is possible that in order to lower the risk for every given case the aforementioned control measures will not be sufficient, and organizations will need to complement them with their own control measures in their due diligence systems (DDS).

How to read the risk assessment table?

The table header of the NRA table for Categories 1, 2, 4 and 5 is the following:

Indicator	Source of information	Indication of risk, evidence used	Functional scale	Risk designation and specification (if not 'low risk') Provide numbers of thresholds that are met and justify the outcome for each threshold	Control Measures M – mandatory R – recommended
1	2	3	4	5	6

Description of columns:

1. The number and title of the indicator.
2. The column shows numbers of information sources used that are grouped in several annexes (sources of information for assessment of Categories 1, 4, 5 – Annex 1.1, sources of information for Category 2 – Annex 1.2, sources of information for Category 3 – Annex 1.3). This column is important for readers who wish to have more information regarding information sources on which the risk designation was based.
3. The column provides risk description and the rationale behind why the risk is assessed as low or specified.
4. The column shows the non-geographical characteristics that were used for dividing the territory into areas of low and specified risk. The column is very important for all NRA users because the assessment for a potential supplier and identification of a relevant level of risk will depend on the information in this column.

If it is indicated that the functional scale is *not applicable (N/A)*, it means that the geographical scale is used. Usually this is 'specified risk' for the whole territory of Russia. However, for some indicators the risk is relevant only for some subjects of the Russian Federation.

5. The column gives thresholds with which the information collected from relevant sources of information was compared. The thresholds are defined in procedure FSC-PRO-60-002a. The column contains reference information for those readers who wish to have better understanding of the technical process of risk assessment.
6. Description of control measures. The column is of great significance for NRA users, because it indicates mandatory or recommended actions that the organization shall or may implement to lower the risk. In case of a low risk, control measures are not needed.

The table header of the NRA table for Category 3 is the following:

HCV category and indicator	Data used for HCV identification	Identified threats	Indication of risk, evidence used	Functional scale	Risk designation and specification (if not 'low risk') Provide numbers of thresholds that are met and justify the outcome for each threshold	Control Measures M – mandatory R – recommended
1	2	3	4	5	6	7

This table header differs from table headers for other controlled wood categories only by the Column No. 3 that indicates the existing threats for high conservation values (HCV). This column contains reference information for those readers who wish to understand what kind of threats arise for different types of HCV due to management activities.

7.1 Category 1: Illegally harvested wood

The volume of harvested wood marked as FSC 100% (meaning harvesting on forest management units certified according to the FSC forest management standard) in 2014 in Russia is estimated to be about 40 Mio m³ as of the beginning of 2015. The volume of controlled wood which comes from uncertified suppliers and is sourced by medium and large FSC certified wood processing companies is estimated to be about 80 Mio m³. The overall volume of harvested wood in Russia is about 200 Mio m³. These numbers show the importance of FSC controlled wood for FSC in Russia⁶.

In accordance with the general traditions of centralized forest management, which were set during the state-planned economy (i.e. until the 1990s), forest management in Russia has the following major features:

- state or municipal ownership of forests;
- all contracts for wood harvesting / forest concessions are done between state or municipal authorities in charge of forest management and private forest managers;
- state control over the organizations' compliance with forest legislation and other regulations.

From 2007 to 2013 in Russia there was no government-run system for wood record keeping or controlling the wood turnover. Such a situation promoted the growth of illegally harvested wood. In these conditions, foreign customers increased their demands to confirm legality of the wood origin by applying procedures of FSC certification.

In order to implement the provisions of EU Regulation No. 995/2010⁷, from the end of 2013 to 2015 Russia adopted a series of legal acts aimed at changing national regulations combating illegal wood harvesting.

Illegal logging is logging in violation of legal requirements, for example, wood harvesting without required permits, or in a volume exceeding the allowable limits, or violating species or age composition, or logging outside the felling area.

Federal Law on Amendments to Individual Legislative Acts of the Russian Federation No. 277-FZ / 21 July 2014 introduced Article 191.1 of the Russian Criminal Code stipulating the liability to prosecution for purchase, storage, transportation, commercial processing and trade of illegally harvested wood.

The announcement by Russia of a 'special military operation' in Ukraine in early 2022 has negatively impacted the overall, baseline risk in Russia. This operation represents a general disregard for international obligations, highlighting the concern that domestic obligations might likewise be disregarded. Therefore, any other negative changes to the risk descriptions are magnified in their potential risks.

The changes in this category (indicator 1.8) were discussed and approved by the Responsible Body before the initiation of the military operation in Ukraine and are therefore limited only to those changes that were already decided upon.

⁶ Expert estimates made by the Center for Standardization and Certification of Round Timber and Lumber *LesExpert*

⁷ Regulation (EU) No 995/2010 of the European Parliament and of the Council of 20 October 2010 laying down the obligations of operators who place timber and timber products on the market

Indicator	Source of information	Indication of risk, evidence used	Geographical/Functional scale	Risk designation and specification (if not 'low risk') Provide numbers of thresholds that are met and justify the outcome for each threshold	Control Measures M – mandatory R – recommended
1.1 Land tenure and management rights	Annex 1.1 (1, 6, 8, 27, 28) Annex 2.1 (1, 2, 5, 6)	Low risk The forest fund comprises 96.8% of all lands where forests occur in the RF. Forests can be also located on lands of protected nature areas, defense and security, settlements and other categories of lands. With the exception of forests located on agricultural lands, all forests are in federal or municipal ownership; land tenure and management rights are under regulations of the Forest and Land Codes and normative legal acts developed in accordance with them. Considering that logging companies do not own forest areas, but use them under the concession agreements, permanent (perpetual) use and free use agreements, standing timber sale contracts and contracts for forest guard, protection and regeneration works (see Indicator 1.2), the risk is considered low.	N/A (low risk for the entire country)	Low risk 'Low risk' threshold No. 1 - <i>Identified laws are upheld. Cases where law/regulations are violated are efficiently followed up via preventive actions taken by the authorities and/or by the relevant entities</i> - from procedure FSC-PRO-60-002a is met. Forest land tenure and management rights belong to the state; no evidence of other types of forest owners was detected.	Not required
1.2 Concession licenses	Annex 1.1 (2-5, 7, 9-11) Annex 2.1 (1, 7-10)	Specified risk This indicator considers concession agreements, permanent (perpetual) use and free use agreements, standing timber sale contracts and contracts for forest guard, protection and regeneration works. In the Russian Federation, the forest fund is in federal ownership. Forests in other categories of lands can be also in municipal ownership. By the results of the bidding, forest areas can be given to an organization under a concession agreement for a period of 1 to 49 years, or under a standing timber sale contract, or under a contract for forest guard, protection and regeneration works, which includes provisions for purchase and sale of timber harvested during these works.	N/A (specified risk for the entire country)	Specified risk 'Specified risk' threshold No. 2 - <i>Identified laws are not upheld consistently by all entities and/or are often ignored, and/or are not enforced by relevant authorities.</i> – from procedure FSC-PRO-60-002a is met. The following risks are observed: the risk of violation of the law, unfair competition, corruption of public officials during auctions and awarding of concession agreements and permanent (perpetual) and free forest use agreements.	1) M – Verification of the duly concluded concession agreement, standing timber sale contract, contract for work execution or a document validating the transfer of the legal right to permanent (perpetual) or free forest area use and availability of these documents in the EGAIS confirm compliance with legislation. 2) R – Verification of information in mass media, publications, records of legal proceedings does not reveal any violations of the law by the supplier, or acts of corruption of public officials during the auctions for concession agreements and/or awarding of standing timber sale contracts and contracts for work execution. <i>If there is sufficient evidence of violation of the law, refrain from sourcing wood.</i>

		<p>A forest area can be also given for permanent (perpetual) use to state establishments for harvesting wood for state/municipal needs.</p> <p>Besides, the Russian Government can grant a concession for state or municipally owned forest areas without a public bidding for implementation of priority investment projects on forest exploitation.</p> <p>Unfair competition in concluding agreements and contracts and a corruption risk exist. According to the globally recognized Corruption Perceptions Index rating Russia occupies 135 place out of 180 possible.</p>			
1.3 Management and harvesting planning	Annex 1.1 (7) Annex 2.1 (1, 11-13)	<p>Low risk</p> <p>Management and harvesting planning in Russia is done according to the following primary normative documents: forest plan (at the regional level), lesokhozyaystvenny reglament (forest management regulations) (at the lesnichestvo or lesopark – state district-level forest management unit level), forest development project (at the level of the forest concession area). Currently the system of control over the forest use is built and exercised in such a way that the absence of these documents or inappropriate procedure of their approval makes it virtually impossible to obtain permits for management activities.</p> <p>The known cases of annulment of forest planning documents and withdrawal of harvesting permits issued in relation to these documents confirm that the control over the availability of respective documents and legality of the approval procedure is quite efficient.</p> <p>Cases when management activities are carried out for a long period and/or on a large scale in the absence of legally approved harvesting planning documents are not known.</p>	<p>N/A</p> <p>(low risk for the entire country)</p>	<p>Low risk</p> <p>'Low risk' threshold No. 1 - <i>Identified laws are upheld. Cases where law/regulations are violated are efficiently followed up via preventive actions taken by the authorities and/or by the relevant entities</i> - from procedure FSC-PRO-60-002a is met.</p> <p>Forest plans of the subjects of RF and lesokhozyaystvenny reglaments of lesnichestvos or lesopark are approved at the government level in accordance with the Russian law.</p> <p>Forest development projects for a forest concession area are also designed in accordance with the national legislation and pass the official state expertise.</p> <p>The risk of conducting management activities for a long period and/or on a large scale in the absence of legally approved forest planning documents is low.</p>	Not required

		Therefore, the risk can be assessed as low.			
1.4 Harvesting permits	Annex 1.1 (4, 12, 21-26, 29, 41, 42) Annex 2.1 (1, 9, 14-19)	<p>Specified risk</p> <p>The problem of illegal harvesting in Russia implies that there is a need for verification of the presence of documents legally required for wood harvesting operations.</p> <p>The documents required for wood harvesting in Russia are:</p> <ul style="list-style-type: none"> - forest development project; - forest declarations; - standing timber sale contract; - contract for forest guard, protection and regeneration works. <p>The problem of illegal logging (in the absence of the documents permitting wood harvesting) is recognized by the state forest management authorities; published evidences are available.</p> <p>There are cases of logging without required documents and cases of obtaining documents in violation of the law.</p>	N/A (specified risk for the entire country)	<p>Specified risk</p> <p>'Specified risk' threshold No. 2 - <i>Identified laws are not upheld consistently by all entities and/or are often ignored, and/or are not enforced by relevant authorities.</i> – from procedure FSC-PRO-60-002a is met.</p> <p>The identified risks are related to the documents which are required for wood harvesting:</p> <ul style="list-style-type: none"> • logging in the absence of these documents (illegal logging), • obtaining documents in violation of the law. 	<p><i>If wood harvesting is carried out under the concession agreement or the awarded right to permanent (perpetual) or free use:</i></p> <p>1) M – The available forest development project approved by the official state expertise verifies compliance with legislation. <i>In case of the absence of the document, refrain from sourcing wood.</i></p> <p>AND</p> <p>2) M – The available forest declarations based on the forest concession agreement, or permanent (perpetual) or free forest use agreement verify compliance with legislation. <i>If the forest declaration is absent or filled in with violations of the standard procedure or does not meet the terms of the concession agreement, refrain from sourcing wood.</i></p> <p><i>If wood harvesting is carried out under the standing timber sale contract:</i></p> <p>3) M – The available standing timber sale contract concluded in the required form verifies compliance with legislation.</p> <p><i>If wood harvesting is carried out under the contract for forest guard, protection and regeneration works:</i></p> <p>4) M – Verification of the available contract for forest guard, protection and regeneration works validates compliance with legislation.</p> <p><i>For all cases:</i></p> <p>5) R – Verification of information in mass media, publications, and records of legal proceedings does not reveal any violations of the law by the supplier or acts of corruption of</p>

					public officials when obtaining wood harvesting permits. <i>If there is sufficient evidence of violation, refrain from sourcing wood.</i>
1.5 Payment of royalties and harvesting fees	Annex 1.1 (13-16) Annex 2.1 (1, 8, 10, 14, 15, 64)	<p>Specified risk</p> <p>If harvesting is carried out under the standing timber sale contract, permanent (perpetual) use and free use agreement or the contract for forest guard, protection and regeneration works, there is no possibility of debt in payment of royalties, because the contract terms stipulate up-prepayment or does not consider any relevant payments.</p> <p>The information about concession holders having debts in many subjects of the Russian Federation is published on Federal Forestry Agency official website and in other sources.</p>	<p>N/A</p> <p>(specified risk for the entire country)</p>	<p>Specified risk</p> <p>'Specified risk' threshold No. 2 - <i>Identified laws are not upheld consistently by all entities and/or are often ignored, and/or are not enforced by relevant authorities.</i> – from procedure FSC-PRO-60-002a is met.</p> <p>There is identified risk of wood being harvested with violation of the Russian law regarding payment of royalties.</p>	<p>1) M – when concluding the agreement and subsequently, on a regular basis at least once a year to check concession agreements of the forest management organization on websites of:</p> <ul style="list-style-type: none"> - Federal Forestry Agency http://rosleshoz.gov.ru/activity/economy_and_finance/stat; OR - regional executive bodies authorized for forest sector relations; OR - other sources of information <p>in order to confirm the absence of overdue payments of the supplier.</p> <p><i>If information about the debt is available:</i></p> <p>2) M – the requested documents from the supplier (documents confirming payments of due fees within the timelines stated in the concession agreement; signed reconciliation statements; documents confirming payment settlements, agreed deferral of payments, payment of overdue royalties by installments, the approved plan for settlement of overdue amounts) verify absence of overdue payments or implementation of measures for debt settlement.</p> <p><i>If the amount of royalties is subject to dispute:</i></p> <p>3) M – materials requested from the supplier to confirm the presence of a reasonable dispute related to the royalties (correspondence, registered court petitions, rulings of the court, etc.) and information received from the supplier on reasonable timelines for the dispute resolution verify implementation of actions for the dispute settlement.</p> <p><i>In case control measures are not sufficient to make a conclusion with regard to the absence of overdue royalties, or its disputable character, or agreed debt settlement procedure, refrain from sourcing wood.</i></p>

1.6 Value added taxes and other sales taxes	Annex 1.1 (17-20) Annex 2.1 (20)	<p>Low risk</p> <p>The tax legislation in Russia is developed in such a way that it permits to reach high results in tax administration and stable revenue flows in the country's budget at all levels.</p> <p>As of the end 2016 considering notwithstanding moderate macroeconomic performance, the Russian Federal Tax Service provided a high growth of tax revenue. The consolidated budget of the country received 14.5 trillion rubles, which is 700 billion rubles, or 5% more than in 2015. All the budget generating tax revenues increased:</p> <ul style="list-style-type: none"> • VAT collected 2.7 trillion rubles, or 8.5% more than the previous year; • profit taxes collected 2.8 trillion rubles, or 6.6% more; • PIT collected 3 trillion rubles with a growth of 7.5%. <p>One of the effective tools of tax administration is, in particular, compulsory collection of outstanding amounts from the taxpayer's account enforced by sending appropriate instructions to banks (Art. 46 of the Russian Tax Code). In case of insufficient amounts to cover tax liabilities, enforcement is exercised through claims for other taxpayer's property by sending a respective notice to the bailiff – the executor (Art. 47 of the Russian Tax Code).</p>	<p>N/A</p> <p>(low risk for the entire country)</p>	<p>Low risk</p> <p>'Low risk' threshold No. 1 - <i>Identified laws are upheld. Cases where law/regulations are violated are efficiently followed up via preventive actions taken by the authorities and/or by the relevant entities</i> - from procedure FSC-PRO-60-002a is met.</p> <p>Laws related to collecting valued added taxes and other profit taxes are strictly upheld. The Russian Federal Tax Service ensured a high growth of tax returns to the budget in 2016.</p>	Not required
1.7 Income and profit taxes	Annex 1.1 (17-20) Annex 2.1 (20)	<p>Low risk</p> <p>The tax legislation in Russia is developed in such a way that it permits to reach high results in tax administration and stable revenue flows in the country's budget at all levels.</p> <p>As of the end 2016 considering notwithstanding moderate macroeconomic performance, the Russian Federal Tax Service provided a high growth of tax revenue. Documents confirming compliance with the requirements (for instance, order on appointment of a person responsible for health and safety issues, health and safety certificates, health and safety instructions</p>

		<p>workers are required to follow occupational health and safety (OHS) rules. However, many Russian regions demonstrate failure to meet occupational health and safety requirements in the forestry sector.</p> <p>The following OHS violations have been observed during harvesting activities:</p> <ul style="list-style-type: none"> - insufficient provision of workers with personal protective equipment (PPE); - poor regulation of working hours and rest time; - unsatisfactory sanitary conditions for workers; - violations of the technological process; - non-compliance with health and safety rules and regulations by workers. 		<p><i>not enforced by relevant authorities</i>- from procedure FSC-PRO-60-002a is met.</p> <p>Risk of wood being harvested with health and safety violations is identified.</p>	<p>developed and provided to workers, health and safety training records, documents confirming provision of workers with appropriate PPEs, etc.) are in place. Actual evidences are in place and/or interviews with workers confirm that proper work and rest conditions are maintained, PPEs are used and in good condition, safety regulations are met, felling site technology and development requirements stated in the technological map and related to work safety are met.</p> <p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS.</p> <p>According to results of implemented control measures, decisions are made about possible wood sourcing and, if necessary, about corrective actions in accordance with the developed DDS.</p>
1.12 Legal employment	<p>Annex 1.1 (60-63)</p> <p>Annex 2.1 (17, 18, 38-40)</p>	<p>Specified risk</p> <p>Violations of the Labor Code of the Russian Federation were identified in the Russian forestry sector. The following violations by employers were observed:</p> <ul style="list-style-type: none"> - employment contract violations; - salary or other due payment (annual holiday allowance, dismissal compensation) term violations; - violations of the dismissal procedure. 	<p>N/A</p> <p>(specified risk for the entire country)</p>	<p>Specified risk</p> <p>'Specified risk' threshold No. 2</p> <p><i>- Identified laws are not upheld consistently by all entities and/or are often ignored, and/or are not enforced by relevant authorities</i>- from procedure FSC-PRO-60-002a is met.</p> <p>There is identified risk of wood being harvested with labor legislation violations, namely regarding employment contract, salary or other payments.</p>	<p>1) M – selective check verifies available employment contracts between workers and employers according to the established procedure.</p> <p>Selection criteria are established by the organization according to the methodology defined in the DDS.</p> <p>2) M – on-site inspection verifies compliance of employment contracts between workers and employers with the requirements of Art.57 of the Labor Code of the RF. The employment contract validity period meets the requirements of Art. 58 and 59 of the Labor Code of the RF.</p> <p>3) R – on-site inspection verifies availability of the register for employment record books and their supplements, as well as compliance of records in employment record books with Art. 66 of the Labor Code of the RF.</p> <p>4) M – interviews with the organization's workers during on-site inspections confirms the absence of any complaints from workers</p>

					<p>regarding the employer's non-compliance with the employment contract provisions.</p> <p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS.</p> <p>According to results of implemented control measures, decisions are made about possible wood sourcing and, if necessary, about corrective actions in accordance with the developed DDS.</p>
1.13. Customary rights	-	<p>N/A</p> <p>Analysis of the legislative base and consultations with experts (see Table 2) showed there are no provisions in the Russian legislation that define or regulate customary rights as they are understood by FSC (according to the definition given in FSC-STD-60-004 V1-0 International Generic Indicators and in the interpretation of indicator 1.13 from FSC-PRO-60-002a). No applicable legislation has been found accordingly.</p>	N/A	N/A	Not required
1.14. Free prior and informed consent	-	<p>N/A</p> <p>Analysis of the legislative base and consultations with experts (see Table 2) showed there are no respective provisions in the Russian legislation.</p>	N/A	N/A	Not required
1.15 Indigenous peoples' rights⁸	Annex 1.1 (64-69) Annex 2.1 (1, 2, 4, 41-49, 56)	<p>Specified risk for the regions where indigenous peoples are present (see Annex 3.1)</p> <p>This indicator considers indigenous peoples rights stipulated by the current legislation on MIPR and related to forest management.</p>	Geographical scale: Federal subjects	<p>Specified risk for the regions where indigenous peoples are present (see Annex 3.1)</p> <p>'Specified risk' threshold No. 2 - <i>Identified laws are not upheld consistently by all entities and/or are often ignored, and/or are</i></p>	<p><i>If supplies from the areas of MIPR residence are identified (according to Annex 3.1):</i></p> <p>1) M – Verification of information in mass media, publications, records of legal proceedings confirm the absence of any violations of indigenous people rights in the area of harvesting.</p>

⁸ Indicator 1.15 considers only indigenous peoples included in the official List of Minor Indigenous Peoples of Russia (MIPR). This indicator assesses the legislation regulating indigenous people rights with regard to forestry activities (according to the requirements of the FSC-PRO-60-002a procedure). The indicator does not assess any other legal acts, indigenous peoples not included in the List of MIPR, or indigenous people rights established on the state level but not referring to forestry activity.

Indicator 2.3 is about the rights of indigenous peoples and peoples maintaining traditional lifestyle as understood by FSC (i.e. broader than they are viewed in the Russian legislation) and which may not be included in the official list of MIPR.

		<p>The status and rights of indigenous peoples are established in the federal law On Guarantees of the Rights of Indigenous Peoples in the Russian Federation and some other laws and regulations.</p> <p>The rights of indigenous peoples include the rights to use any category of land in areas of their traditional residence and traditional management, rights to participate in control over such land, and rights for compensation for the damage to their indigenous environment. The legal acts provide the list of indigenous peoples of the RF, list of places of their traditional residence and traditional management, and principles of community organization.</p> <p>However, mass media provide evidences of violations of the law and outright conflicts with indigenous peoples. Forest management activities are performed in the areas of residence and activity of indigenous peoples with no preliminary consultations with them. The legislation related to indigenous peoples is declarative in nature. It contradicts other federal laws regarding identification of territories of traditional nature use, and it is not reinforced by any regulations.</p> <p>For indigenous peoples this leads to the loss of traditional places of natural resource use – hunting, fishing or collecting non-timber forest products, etc.</p>		<p><i>not enforced by relevant authorities</i>- from procedure FSC-PRO-60-002a is met.</p> <p>The indicator shall be observed by the organizations controlling the supply from the areas where indigenous peoples are identified according to Annex 3.1.</p> <p>There is identified risk of wood being harvested with violation of indigenous peoples' rights for preservation of traditional places for natural resource use – hunting, fishing or collecting non-timber forest products.</p> <p>Low risk for the rest of the Russian Federation</p> <p>'Low risk' threshold No. 1 - <i>Identified laws are upheld. Cases where law/regulations are violated are efficiently followed up via preventive actions taken by the authorities and/or by the relevant entities</i> - from procedure FSC-PRO-60-002a is met.</p>	<p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS.</p> <p>2) M – Interviews with representatives of indigenous peoples confirms the absence of any disputes of substantial magnitude⁹ related to logging activities in the given area and respect for indigenous peoples' rights.</p> <p>3) R – Interviews with the administration, NGOs, etc. (the exact list is determined by the organization) verify absence of any violation of indigenous peoples' rights by the supplier.</p> <p><i>If any violation of indigenous peoples' rights is identified</i></p> <p>4) M – conduct measures to settle the arising disputes.</p> <p><i>If no dispute settlement is possible:</i></p> <p>5) M – refrain from sourcing wood.</p>
--	--	---	--	---	---

⁹ Dispute of substantial magnitude – dispute that involves (at least one of the following):

- Affects the legal or customary rights of indigenous peoples and local communities;
- Where the negative impact of management activities is of such a scale that it cannot be reversed or mitigated;
- Physical violence;
- Destruction of property;
- Presence of military bodies;
- Acts of intimidation against forest workers and stakeholders. (Source: FSC-STD-60-004 V1-0)

1.16. Classification of species, quantities, qualities	Annex 1.1 (70-73) Annex 2.1 (50-55)	<p>Low risk</p> <p>Classification and accounting practices for wood products are stipulated by the Russian legislation. No violation of this legislation has been identified.</p> <p>It is required to mark valuable tree species piece-by-piece and report the data to the Unified State Automated Information System (EGAIS), which also contains data on all transactions with round wood and sawn materials. Similar requirements, except for marking, cover all species. State Forestry Agency deals with the Unified State Automated Information System development.</p>	N/A (low risk for the entire country)	<p>Low risk</p> <p>'Low risk' threshold No. 1 - <i>Identified laws are upheld. Cases where law/regulations are violated are efficiently followed up via preventive actions taken by the authorities and/or by the relevant entities</i> - from procedure FSC-PRO-60-002a is met.</p> <p>The respective laws are available. No violations have been detected. Data on transactions (including information about species, quality and quantity of goods) are booked in the EGAIS. This requirement guarantees that no round wood can be sold without respective registration in the EGAIS.</p>	Not required
1.17 Trade and transport	Annex 1.1 (35, 73-75) Annex 2.1 (1, 53-60)	<p>Specified risk</p> <p>Cases of wood trade transactions without sale (supply) contracts or with violations of the Civil Code of the RF in the forestry sector are identified on a permanent basis, which is pointed out by the experts (Table 2) and mass media.</p> <p>Trucks are mainly used for transporting the harvested roundwood from the forest and other wood products.</p> <p>Each batch of goods shall be accompanied by transportation documents during transportation. All regional and federal roads are controlled and loaded trucks are checked by the State Traffic Police to confirm they are accompanied by duly issued valid transportation documents. Under conditions when the corruption risk is admitted, the verification of transportation documents does not guarantee legal transportation or transportation of legally harvested wood.</p> <p>Besides, local roads used for short distance transportation remain uncontrolled.</p>	N/A (specified risk for the entire country)	<p>Specified risk</p> <p>'Specified risk' threshold No. 2 - <i>Identified laws are not upheld consistently by all entities and/or are often ignored, and/or are not enforced by relevant authorities</i> - from procedure FSC-PRO-60-002a is met.</p> <p>There is identified risk of wood being harvested without sale contracts or with violations of such contracts.</p> <p>The risk of transportation without any transportation documents or with documents issued with violation of the legal requirements.</p>	<p>1) M – Verification of the transaction registration in the EGAIS confirms the legality of trade</p> <p><i>In case of truck transportation:</i></p> <p>2) R – wood transportation documents verify the legal origin of wood and compliance with legal requirements</p>

		<p>The known cases of transportation of illegally harvested wood are related to truck transportation.</p> <p>In case of water or railway transportation, there are tougher requirements transportation documents, which reduces the risk of transportation of illegally harvested wood. In addition, it is not possible to deviate from the initially agreed route (railway or waterway) unlike with transportation by trucks.</p> <p>In case of water or railway transportation, documents are provided to the carrier and verified before the actual transportation.</p>			
1.18 Offshore trading and transfer pricing	<p>Annex 1.1 (76-79)</p> <p>Annex 2.1 (20, 65, 66)</p>	<p>Low risk</p> <p>To control the offshore trading, the Russian Government has developed a number of control and restrictive measures, including reinforced control over taxation, development of the offshore zone list and taxation rules for companies registered in offshores, control over transactions between interdependent Russian organizations, pricing agreements for taxation purposes between taxpayers identified as biggest taxpayers and Federal Tax Service of Russia.</p> <p>The Russian Federal Customs Service oversees all export transactions by comparing contract prices with indicative prices and taking additional control measures in case if the difference is over 5%.</p>	<p>N/A</p> <p>(specified risk for the entire country)</p>	<p>Low risk</p> <p>'Low risk' threshold No. 1 - <i>Identified laws are upheld. Cases where law/regulations are violated are efficiently followed up via preventive actions taken by the authorities and/or by the relevant entities</i> - from FSC-PRO-60-002a procedure is met.</p> <p>The government undertakes a set of measures to redirect cash flows and supply the state budget. The Federal Customs Service oversees all export transactions.</p>	Not required
1.19 Custom regulations	<p>Annex 1.1 (80, 81)</p> <p>Annex 2.1 (1, 67)</p>	<p>Low risk</p> <p>Compliance with the custom legislation is ensured by the rigidity of its application by the Federal Customs Service. The documents required for wood export are listed in legislative documents; their availability is controlled by the customs service. It is not possible to transport wood without export permitting documents.</p>	<p>N/A</p> <p>(low risk for the entire country)</p>	<p>Low risk</p> <p>'Low risk' threshold No. 1 - <i>Identified laws are upheld. Cases where law/regulations are violated are efficiently followed up via preventive actions taken by the authorities and/or by the relevant entities</i> - from FSC-PRO-60-002a procedure is met.</p>	Not required

		The identified cases of illegal export operations with timber do not fall under the scope of the indicator, because export is organized in circumvention of customs points.		Custom laws are upheld. It is not possible to transport wood across the customs point without export permitting documents.	
1.20. CITES	Annex 1.1 (82-84) Annex 2.1 (61-63)	<p>Specified risk</p> <p>Information sources and experts (Table 2) confirm the facts of violation of the CITES and violations of the procedure for issuing permits for exports of CITES wood products from Russia.</p> <p>Species on the CITES list (Korean pine (<i>Pinus koraiensis</i>), Mongolian oak (<i>Quercus mongolica</i>), Manchurian ash (<i>Fraxinus mandshurica</i>), Japanese yew (<i>Taxus cuspidata</i>)) grow only in Amur and Sakhalin oblasts, Zabaikalskiy, Primorskiy and Khabarovskiy krais. These species do not occur in other subjects of RF.</p>	<p>Geographical scale: Federal subjects</p> <p>(Specified risk for: Amur and Sakhalin oblasts, Zabaikalskiy, Primorskiy and Khabarovskiy krais</p> <p>Low risk for all other subjects of RF)</p>	<p>Specified risk for Amur and Sakhalin oblasts, Zabaikalskiy, Primorskiy and Khabarovskiy krais.</p> <p>'Specified risk' threshold No. 2 - <i>Identified laws are not upheld consistently by all entities and/or are often ignored, and/or are not enforced by relevant authorities</i> - from procedure FSC-PRO-60-002a is met.</p> <p>Low risk for all other subjects of RF, because the abovementioned CITES species do not grow there.</p> <p>There is an identified risk of export of products from CITES species for Amur and Sakhalin oblasts, Zabaikalskiy, Primorskiy and Khabarovskiy krais.</p>	<p>1) M – Verification of permits for export from the Russian Federation the below mentioned CITES species:</p> <ol style="list-style-type: none"> 1) Korean pine (<i>Pinus koraiensis</i>), 2) Mongolian oak (<i>Quercus mongolica</i>) 3) Manchurian ash (<i>Fraxinus mandshurica</i>) 4) Japanese yew (<i>Taxus cuspidata</i>) <p>confirms the legality of supply.</p> <p>2) R – Verification of information in mass media, publications, records of legal proceedings do not reveal any violations by the supplier of the Russian export requirements for CITES species.</p>
1.21. Legislation requiring due diligence/ due care procedures	-	<p>N/A</p> <p>Applicable legislation is not identified</p>	N/A	N/A	Not required

7.2 Category 2: Wood harvested in violation of traditional and human rights

The Russian Federation ratified all 8 fundamental ILO conventions:

- C029 - Forced Labour Convention
- C087 - Freedom of Association and Protection of the Right to Organise Convention
- C098 - Right to Organise and Collective Bargaining Convention
- C100 - Equal Remuneration Convention
- C105 - Abolition of Forced Labour Convention
- C111 - Discrimination (Employment and Occupation) Convention
- C138 - Minimum Age Convention
- C182 - Worst Forms of Child Labour Convention

The Committee of Experts on the Application of Conventions and Recommendations for the period 2012-2017 registered 1-2 observations and/or direct requests to the Russian Federation per each of the convention to take actions to full compatibility with conventions requirements¹⁰. Although this at large relates to general labor issues, isolated incidents of violation of workers' rights might happen in the forest sector of the Russian Federation, as stated by the Russian Union of Forest Industries Workers and in other information sources. Therefore, for the purpose of sourcing controlled wood all indicators related to ILO conventions and ILO Declaration on Fundamental Principles and Rights at Work shall be evaluated by the FSC certificate holder. Exception is an indicator for child labor. No evidences of work that is inappropriate for a child's age, affects children's education, or is likely to harm their health, safety or morals were found for the forest sector.

The C169 - Indigenous and Tribal Peoples Convention remains unratified. Although the national legislation for indigenous peoples is in place, it is not comprehensive and not fully enforced in practice. In addition to it, the definition of *Minor Indigenous Peoples of Russia* used in Russian legislation differs from the UN definition and interpretation of indigenous and traditional peoples. In the category 2 of controlled wood FSC refers to the UN definition, which is wider than the national interpretation. This results in lack of legislative mechanisms and normative guidance for indigenous peoples to protect their rights and lack of established practices for forest managers in terms of dealing with indigenous and traditional peoples rights. Forest managers being granted full legal rights for harvesting might not always consider rights of indigenous and traditional peoples as foreseen by the category 2 of controlled wood, which results in destruction of traditional lifestyle and conflicts with indigenous peoples.

The announcement by Russia of a 'special military operation' in Ukraine in early 2022 has negatively impacted the overall, baseline risk in Russia. This operation represents a general disregard for international obligations, highlighting the concern that domestic obligations might likewise be disregarded. Therefore, any other negative changes to the risk descriptions are magnified in their potential risks.

Indicator	Source of information	Indication of risk, evidence used	Functional scale	Risk designation and specification (if not 'low risk') Provide numbers of thresholds that are met and justify the outcome for each threshold	Control Measures M – mandatory R – recommended
-----------	-----------------------	-----------------------------------	------------------	---	--

¹⁰ You can see the full list of observations and/or direct requests of the Committee of Experts on the Application of Conventions and Recommendations here https://www.ilo.org/dyn/normlex/en/f?p=NORMLEXPUB:13201:0::NO:13201:P13201_COUNTRY_ID:102884:NO%27,600,500

2.1 The forest sector is not associated with violent armed conflict, including that which threatens national or regional security and/or is linked to military control	Annex 1.2 (1-8)	<p>Specified risk</p> <p>The risk designation for this indicator was introduced by FSC based on FSC-ADV-60-002-01.</p> <p>From 24 February 2022, the sourcing conditions in Russia underwent a rapid change due to governmental decisions with the declaration of a 'special military operation' against Ukraine. These conditions represent a particular threat to the integrity of sourcing controlled wood, as all forest in the country is owned by the state. Therefore, any forestry activities are inherently associated with violent armed conflict that threatens national and regional security, and is linked to military control.</p> <p>Furthermore, considering the international condemnation of the Russian aggression against Ukraine, as well as EU sanctions issued against Belarus, there is uncertainty of sanctions being imposed on Russia, which contributes to the application of a precautionary approach.</p>	N/A	<p>Specified risk</p> <p>'Specified risk' threshold No. 7 from FSC-PRO-60-002a is met. -</p> <p><i>(7) Operators in the area under assessment are involved in conflict timber supply/trade</i></p>	<p>Control measure for this indicator was introduced by FSC based on FSC-ADV-60-002-01.</p> <p>1) M - Do not source material from Russia</p>
2.2 Labor rights are upheld including rights as specified in ILO Fundamental Principles and Rights at Work	Annex 1.2 (9-12)	<p>Specified risk</p>		<p>Specified risk</p>	
2.2.a Rights for freedom for association and collective bargaining	Annex 1.2 (13-20) Annex 2.2 (1-6)	<p>Specified risk indication</p> <p>The rights for freedom of association and collective bargaining fixed by ILO fundamental Conventions No. 87 and No. 98 are reflected in the Russian legislation.</p> <p>The sources of information and data provided by the chairman of the Russian Union of Forest Industries Workers indicate that there are violations of workers' unions' rights, including acts of interference in the internal affairs of workers' unions by employers, for example administration of employees' fees to worker's union</p>	<p>N/A</p> <p>(specified risk for the entire country)</p>	<p>Specified risk indication</p> <p>'Specified risk' threshold No. 15</p> <p><i>- There is substantial evidence of widespread violation of the ILO Fundamental Principles and Rights at Work - from procedure FSC-PRO-60-002a is met.</i></p> <p>There is identified risk of wood or wood products being harvested with violations of workers' rights for freedom of association and collective bargaining.</p> <p>There is evidence of violations of the right for collective bargaining in the forestry sector.</p>	<p><i>If there is a workers' union:</i></p> <p>1) M – a letter of inquiry to the workers' union or interviews with the representative hereof confirms that the rights of unions are upheld</p> <p><i>If there is no workers' union:</i></p> <p>2) M – confidential interviews with workers during selective field verifications verify the absence of any obstruction from the side of the company's management regarding the implementation of workers' right for freedom of association</p> <p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS</p>

		deducted from salaries in personal interest and other financial manipulations.			3) R – Verification of information in mass media, publications, records of legal proceedings does not reveal any violation of the workers' rights stated in ILO conventions No. 87 and No. 98 by the supplier
2.2.b Compulsory or forced labor	Annex 1.2 (21-27) Annex 2.2 (1-3, 12-14)	<p>Specified risk indication</p> <p>Any forced labor and labor discrimination are prohibited according to the Labor Code of the RF.</p> <p>The Russian Penal Code regulates the convict labor. Each person sentenced to imprisonment is required to work in workplaces and jobs determined by administrations of penitentiary institutions at enterprises of such institutions, at state enterprises, or at enterprises of other forms of ownership.</p> <p>Article 2.2.c of ILO Convention No. 29 strictly prohibits that convicts are hired to or placed at the disposal of private individuals, companies or associations. Their employment at private enterprises is compatible with the Convention only with acquiring free, informed and formal consent of prisoners. This ILO's requirement is not reflected in the Russian law.</p> <p>There are evidences of engaging convicts in works related to private interests of employees of penitentiary institutions. There are examples of failure to ensure standards of labor conditions and occupational safety of convicts.</p>	N/A (specified risk for the entire country)	<p>Specified risk indication</p> <p>'Specified risk' threshold No. 14 - <i>The applicable legislation for the area under assessment contradicts indicator requirement(s)</i> - from procedure FSC-PRO-60-002a is met.</p> <p>There are cases of transferring convicts for hire or placing them at the disposal of private organizations, increasing the risk of . There are also examples of failure to ensure standards of labor conditions and occupational safety of convicts.</p>	<p><i>If supplies from penitentiary institutions:</i></p> <p>1) M – official letter of inquiry to the territorial public monitoring committee for protection of human rights in penitentiary institutions¹¹ confirms absence of any violations of rights of convicts during wood harvesting at a particular enterprise</p> <p>2) If territorial public monitoring committee for protection of human rights in penitentiary institutions informs about violations of human rights:</p> <ul style="list-style-type: none"> a) R – refrain from sourcing wood, OR b) R – request explanatory information and/or documentation from management of the penitentiary institution to clarify the situation about violation of human rights, OR c) R – organize field verification to obtain more information and clarify the situation about violation of human rights <p>3) R – interviews with convicts during field verification confirm voluntary use of labor of the convicts and compliance with the OHS requirements</p> <p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS</p> <p>4) R – Verification of information in mass media, publications, records of legal proceedings do not reveal any violations of the labor legislation or the Russian Penal Code with regard to forced labor of convicts by the supplier</p>

¹¹ The list of existing committees for protection of human rights in penitentiary institutions is available on the web-site of the Civic Chamber of the Russian Federation
<https://www.oprf.ru/1449/2133/1536/1857>

2.2.c Child labor	Annex 1.2 (28-37) Annex 2.2 (1-3,15,16)	Low risk indication According to FAO worldwide child labor is predominantly used in agriculture. Mainly it is used in countries affected by armed conflicts and on family farms and enterprises in Africa and Asia. Russian forest sector is not affected by any armed conflicts. The Russian legislation prohibits the labor of underage children in any types of harvesting activities. There are no small family forestry businesses in Russia which reduces the risk of child labor. No cases of any court decisions on inappropriate involvement of children into wood harvesting or wood processing activities and pesticide use were found in databases of judicial decisions for the past five years. On the contrary a small number of cases related to agriculture (i.e. working in grain storages) were found. No other evidences of involving children into forest sector related activities in such a way that is inappropriate for a child's age, affects children's education, or is likely to harm their health, safety or morals were detected in information sources.	N/A (low risk for the entire country)	Low risk indication 'Low risk' thresholds Nos. 11, 12 - <i>Applicable legislation for the area under assessment does not cover all ILO Fundamental Principles and Rights at Work but other regulations and/or evidence of their implementation exist. Reports do not lead to conclusions of systematic violations of rights. When labor laws are broken, cases are efficiently followed up via preventive actions taken by the authorities and/or by the relevant entities.</i> - <i>Other available evidence does not challenge a 'low risk' designation</i> - from procedure FSC-PRO-60-002a are met. The Russian legislation prohibits the labor of underage children in any types of harvesting activities. There are no small family forestry businesses in Russia which reduces the risk of child labor. No cases of any court decisions on inappropriate involvement of children into wood harvesting or wood processing activities and pesticide use were found in databases of judicial decisions for the past five years. No other evidences of involving children into forest sector related activities in such a way that is inappropriate for a child's age, affects children's education, or is likely to harm their health, safety or morals were detected in information sources.	Not required
2.2.d. Gender discrimination	Annex 1.2 (37-44) Annex 2.2 (1-3, 7-11)	Specified risk indication Analysis of sources of information indicates gender-based discrimination in employment. ILO Conventions No. 100 and No. 111 proclaim the principle of equal remuneration for work of equal value regardless of sex and non-discrimination in employment or occupation. However, representatives of the Russian Government, Civic Chamber and Russian President point out that on the national level women's salaries are at least 26% lower than men's salaries for the same positions.	N/A (specified risk for the entire country)	Specified risk indication 'Specified risk' threshold No. 15 - <i>There is substantial evidence of widespread violation of the ILO Fundamental Principles and Rights at Work</i> - from procedure FSC-PRO-60-002a is met. The sources of information contain evidences of gender-based inequality in employment. The UN prescribed the Russian Government to amend the legislation respectively.	1) M – interviews with the HR specialist, (female) workers of the company, representative of the staff confirms absence of discrimination or violations of women's rights The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS 2) R – Verification of information in mass media, publications, records of legal proceedings do not reveal fact of gender discrimination of workers

		<p>In addition, the Russian labor legislation has an official list including 456 jobs prohibited for women. 7 jobs (based on occupation) are related to harvesting activities and wood rafting. The UN has recognized the list to be discriminatory for women and prescribed the Russian Government to review the respective regulations of the labor legislation by the recommendation of the UN revised the list of jobs with limits on female employment. The revised list is significantly shorter and does not include forest industry jobs. In general harmful effects of which are incompatible with women's physiology.</p> <p>To a certain extent, the gender wage inequality still exists but it declined in recent years. It is due to social traditions, when women are more inclined to devote themselves to household management and child care than men. The Russian authorities call for changing the established traditions. Therefore in today's practice, for example, cases of using parental leave by a man or other female relatives are common as permitted by the Russian legislation.</p>			
2.2.e. Racial (national origin) discrimination	<p>Annex 1.2 (37-39, 45-48)</p> <p>Annex 2.2 (1-3,7,10)</p>	<p>Specified risk indication</p> <p>ILO Convention No. 111 ratified by Russia and Russian labor legislation prohibits any forms of discrimination in employment. In line with ILO Convention 111, the term 'discrimination' includes, but is not limited to, any distinction, exclusion or preference made on the basis of race, colour, sex, religion, political opinion, national extraction or social origin, which has the effect of nullifying or impairing equality of opportunity or treatment in employment or occupation.</p> <p>However, it is found that there are cases of discrimination of migrant workers on the basis of race or national origin.</p> <p>In most cases migrant workers are involved in near-border areas of Siberia and the Russian Far East. However, it is noted that the number of migrants in the forestry sector has increased in other Russian regions as well, for example, in the central</p>	<p>N/A</p> <p>(specified risk for the entire country)</p>	<p>Specified risk indication</p> <p>'Specified risk' threshold No. 15 - <i>There is substantial evidence of widespread violation of the ILO Fundamental Principles and Rights at Work</i> - from procedure FSC-PRO-60-002a is met.</p> <p>There are cases of discrimination of migrant workers in the RF. In the forestry sector, migrant workers are engaged in different parts of the country.</p> <p>There is identified risk of wood being harvested with discrimination of migrant workers in the forestry sector.</p>	<p>1) M – interview with the HR specialist is carried out to identify if there are any migrants among the company's workers</p> <p><i>If there are migrant workers in the company:</i></p> <p>2) M – interviews with company's workers (migrants), representatives of staff confirm that labor rights of migrants are upheld on an equal basis with other employees of the company</p> <p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS</p>

		and north-western parts of the country, which does not permit to identify any low risk areas.			
2.3 The rights of indigenous and traditional peoples are upheld	Annex 1.2 (49-55) Annex 2.2 (17) Annex 1.1 (64-69) Annex 2.1 (1, 2, 4, 42-50, 58)	<p>Specified risk for the regions where indigenous and traditional peoples are present (see Annex 3.1)</p> <p>For the purposes of this indicator, it is necessary to consider indigenous peoples as it is understood by FSC¹², which is broader than by the Russian legislation and not limited to MIPR. Traditional peoples are forest dependent communities supporting their rights for the resources by long established customs.</p> <p>Russia has not ratified ILO Convention No. 169 on Indigenous and Tribal Peoples in Independent Countries.</p> <p>Indigenous peoples usually live in severe natural and climatic conditions in remote areas. Their occupational activities often serve as the main and often the only means of sustenance.</p> <p>The sources of information confirm cases of violation of traditional (customary) rights related to the possibility to maintain traditional lifestyle, including traditional use of resources (hunting, non-timber forest product collecting, fishing, wood harvesting for own needs, etc.).</p> <p>Areas of settlement of indigenous peoples identified according to the Russian legislation and peoples self-declared to be indigenous, but not registered officially,</p>	<p>Geographical scale: Federal Subjects</p> <p>Specified risk for the regions where indigenous and traditional peoples are present (see Annex 3.1)</p> <p>Low risk for the regions with no such peoples</p>	<p>Specified risk for the regions where indigenous and traditional peoples are present (see Annex 3.1)</p> <p>'Specified risk' threshold No. 26 - <i>There is evidence of conflict(s) of substantial magnitude pertaining to the rights of indigenous and/or traditional peoples. Laws and regulations and/or other legally established processes do not exist that serve to resolve conflicts in the area concerned, or, such processes exist but are not recognized by affected stakeholders as being fair and equitable. Note under threshold No. 20 applies</i></p> <p>- from procedure FSC-PRO-60-002a is met.</p> <p>There is identified risk of wood being harvested with violation of traditional (customary) rights of indigenous and traditional peoples that maintain traditional lifestyle (including hunting, non-timber forest product gathering, fishing, wood harvesting for own needs, etc.).</p> <p>Low risk for the regions where indigenous or traditional peoples are not present</p> <p>'Low risk' threshold Nos. 16, 19 and 21 - (16) <i>There is no evidence leading to a conclusion of presence of indigenous and/or traditional peoples in the area under assessment;</i> (19) <i>There is no evidence of conflict(s) of substantial magnitude pertaining to rights of indigenous and/or traditional peoples;</i></p>	<p><i>If supplies from the areas of settlement of indigenous and traditional peoples are identified:</i></p> <p>1) M – Verification of information in mass media, publications, records of legal proceedings do not reveal any violations of indigenous and traditional peoples' rights by the supplier</p> <p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS.</p> <p>2) M – interviews with representatives of indigenous and traditional peoples confirm absence of disputes of substantial magnitude related to harvesting in the area and upholding indigenous peoples' rights</p> <p>3) R – interviews with local self-governing authorities at the level of settlements, non-governmental organizations, etc. (an exact list is determined by the organization) confirm the absence of violations by the supplier of the rights of indigenous and traditional peoples</p> <p>If any violation of indigenous or traditional peoples' rights is detected, undertake measures to settle the arising disputes</p> <p>If no dispute settlement is possible, refrain from sourcing wood.</p>

¹² NRA and the Russian national FSC forest management standard (please see Guidance to indicator 3.1.1) use the same criteria to identify peoples as indigenous peoples. The criteria are based on the FSC definition of indigenous peoples adjusted for the Russian national conditions. According to the definition, indigenous peoples are groups of people meeting all of the following criteria:

1. Self-identification at the individual level and the acceptance by the community as their member
2. Historical continuity with communities of this nation that lived in the area before its settlement by other nations and/or during several centuries;
3. Dependence on natural resources of the area as a source of livelihood;
4. A lifestyle that resolves to maintain and reproduce traditional for these peoples' environments and distinct way of life based on traditional uses of natural resources; and
5. Form non-dominant groups of society

		<p>and/or maintaining traditional lifestyle are known (Annex 3.1).</p> <p>The presence of such peoples in other regions is unlikely. The population in such regions will be considered as local communities under indicators 3.5 and 3.6.</p> <p>Low risk for the regions where indigenous or traditional peoples are not present</p> <p>Areas of settlement of indigenous peoples identified according to the Russian legislation and peoples self-declared to be indigenous, but not registered officially, and/or maintaining traditional lifestyle are known (Annex 3.1).</p> <p>The presence of such peoples in other regions is unlikely. However, it might happen that in specific areas groups of people self-declared to be indigenous peoples maintaining traditional lifestyle will be identified. The population in such regions will be considered as local communities under indicators 3.5 and 3.6</p>		<p>(21) Other available evidence does not challenge a 'low risk' designation - from procedure FSC-PRO-60-002a are met.</p>	
--	--	--	--	--	--

7.3 Category 3: Wood from forests in which high conservation values are threatened by management activities

All 6 types of high conservation values (HCVs) are present in the Russian Federation. Some of them have a legal protection status, for example as protected nature areas, the others have not. Forest areas having high conservation values can be given for lease, and thus it becomes the responsibility of forest managers and the sourcing FSC certified organizations to confirm that the wood has been harvested without HCVs destruction. Therefore, the specified risk of sourcing wood harvested in HCVs is given to all the indicators of category 3.

The development of FSC certification in Russia increased the awarenesses of forest managers about the HCV concept and process for developing materials for HCVs identification, monitoring and preservation. In recent years with the growing importance of geoinformation systems (GIS) and accumulation of information, the GIS-based data sets for various HCVs start to appear. WWF created a web site <http://hcvf.ru> where it publishes GIS-based HCV data developed by WWF and other key environmental stakeholders with contact details of responsible stakeholder. The website makes easier the HCV (type 1-3 and partly type 5 and 6) identification for FSC certificate holders and, in case of HCV presence, indicates whom they shall contact for further negotiations. For identification of HCV 5 and 6 additional interviews with local self-governing authorities shall be carried out. FSC Russia officially recognizes the website and encourages FSC certificate holders, certification bodies, FSC consultants and stakeholders to use it.

Information about HCV 4 and their location can be found in official forest planning documents (lesokhozyaystvenny reglaments of lesnichestvos/lesoparks, forest plans of the subjects of RF, forest development projects, and forest inventory data).

In terms of technical assessment, the Strategy for Maintaining High Conservation Values was used as a basis for the controlled wood category 3. The strategy will be a normative part of the new FSC national forest management standard. Part of the strategy is entitled "National Interpretation of HCV" and gives a full description of HCVs and methods for its identification and management. The "National Interpretation of HCV Types and Subtypes" identifies further subdivision of HCVs, however for the purpose of this NRA, the HCVs are assessed at the level of categories (i.e HCV 1, HCV 2 etc.) without specifying any particular subtypes.

HCV category and indicator	Data used for HCV identification	Identified threats	Indication of risk, evidence used	Functional scale	Risk designation and specification (if not 'low risk') Provide numbers of thresholds that are met and justify the outcome for each threshold	Control Measures M – mandatory R – recommended
3.0 Data available are sufficient for: a) Determination of HCV presence for each HCV, AND b) The assessment of the threats to HCVs from forest management activities	Annex 1.3 (1-11, 13, 15-56, 60-64, 66-80, 82, 83, 85-89)	-	<p>Low risk</p> <p>On the territory of the Russian Federation all 6 types of HCVs are present.</p> <p>In recent years a lot of research was done to make inventory of HCVs and to develop methods for HCV identification, conservation and monitoring. The results of this work are reflected in abundant publications that are already being used by FSC certified companies.</p> <p>Comprehensive and detailed work was carried out to identify and conserve HCVs in a number of Russian regions. They include Arkhangelsk Oblast, Khabarovskiy Krai and Jewish Autonomous Okrug, Primorskiy Krai, the Republic of Komi and some others.</p> <p>Publicly available information about all types of HCV is collected on the HCVF of Russia website at http://hcvf.ru (Russian version). Publications on biodiversity conservation and HCVF are also available at FSC Russia website.</p> <p>HCV 1</p> <p>Information on the location and recommended conservation measures for HCV 1 is available on HCVF of Russia website at http://hcvf.ru and other sources including website for Russian wetlands http://www.fesk.ru/, at Birdlife International website http://www.birdlife.org/datazone/site, at Russian Bird Conservation Union website http://www.rbcu.ru/programs/54, as well as in a range of publications, at Plantlife website http://www.plantlife.org.uk/international/wild_plants/IPA/ipa_criteria_and_methodology/, Emerald Book http://www.xidi.ru/.</p> <p>Data on Red Books of the subjects of RF is available on FSC Russia website (https://ru.fsc.org/ru-for_zs/lvpc/sistema_zashity_redkih_vidov) and other sources.</p> <p>HCV 2</p> <p>Information about all sub-types of HCV 2 is available at HCVF Russia website (http://hcvf.ru) and other sources.</p>	N/A	<p>Low risk</p> <p>'Low risk thresholds Nos. 1 and 2 –</p> <p>(1) Data available are sufficient for determining HCV presence within the area under assessment;</p> <p>(2) Data available are sufficient for assessment of the threats to HCVs caused by forest management activities - from procedure FSC-PRO-60-002a are met.</p> <p>Available information is sufficient to identify and assess threats to HCV 1-6 related to forest management activities.</p>	Not required

			<p>There are numerous publications on IFL identification methods and assessment of threats to them.</p> <p>HCV 3 Usually information about HCV 3 is of quite general character. A number of publications contain information on rare ecosystems in regions and provide their lists and justifications. Information on the boundaries of the identified HCV 3 is available on HCVF Russia website (http://hcvf.ru).</p> <p>HCV 4 HCV 4, including water protection, anti-erosion and other functions, is well covered by the Russian legislation for categories of protective forests and OZU. Information is sufficient to identify HCV 4 location and select forest management/conservation measures. The information is available in forest planning documents (lesokhozyaystvenny reglaments of lesnichestvos/lesoparks, forest plans of the subjects of RF, forest development projects, and forest inventory data). Some of these documents can be found at websites of regional forest management authorities, at HCVF Russia website (http://hcvf.ru/dataBase).</p> <p>HCV 4 is present in nature protected areas and other categories of protective forests, and OZU, therefore their description and respective threats are covered in literature about these forests and in sources on HCVFs in general.</p> <p>HCV 5 and 6 HCV 5 and 6 identification methods were developed by NGOs representing social interests (e.g. WWF Russia, Fund Silver Taiga, Centre for Independent Social Research). There is some information about the location of HCV 5 and 6 and threats related to these HCVs related to forest management activities. For some regions of Russia, information about boundaries of HCV 5 and 6 subtypes is available on HCVF Russia website (http://hcvf.ru).</p>			
3.1. HCV 1. Species diversity	Annex 1.3 (1-3, 5-9, 12-28, 30, 31, 35-41, 44-57, 60-61, 63-65, 67-69, 72, 76, 83, 85-89)	Habitat destruction and/or fragmentation	<p>Specified risk</p> <p>1) HCV 1 are areas of high biodiversity significance at the global, national or regional level. HCV 1 include wetlands, important bird areas of Russia (KOTR), important plant areas (KBT), and other ecosystems with a high biodiversity level and key wildlife habitats.</p>	N/A (specified risk for the entire country)	<p>Specified risk</p> <p>'Specified risk' threshold No. 8 - <i>HCV 1 is identified and/or its occurrence is likely in the area under assessment and it is</i></p>	<p>1) M – verification on maps at http://hcvf.ru (Russian version) identifies the HCV location in relation to wood harvesting areas.</p> <p>2) M –</p>

	Annex 2.3 (1,2, 3, 5-7, 9, 15-21)		<p>2) Forests with HCV 1 occur virtually everywhere in Russia. Information about HCV 1 location is available at http://hcvf.ru in the 'Maps' section, as well as in other sources.</p> <p>3) Not all HCV 1 are protected at the national level, therefore their destruction and/or fragmentation may occur.</p> <p>4) Conservation measures related to wetlands, KOTRs, KBTs and other are described not in sufficient detail for specific forest areas.</p> <p>5) Information sources have no evidence of threats to HCV 1 in Russia from the introduction of alien/invasive species as a result of forest management activities. Only local tree species shall be used for forest regeneration. This threat does not exist.</p> <p>6) From the international perspective: Russia has ratified the Convention on Biodiversity and is in process of implementing its national targets, including covering 13,5% of its territory by a system of protected areas (by the beginning of 2017 13,6% of the territory was covered).</p>		<p><i>threatened by management activities -</i> from procedure FSC-PRO-60-002a is met.</p> <p>Forests with HCV 1 occur virtually everywhere in Russia. Not all areas designated as HCV 1 are legally protected by the legal protection status.</p> <p>The risk of harm to HCV 1 caused by harvesting operations is relevant for any company. Forest management activities may cause fragmentation and destruction of forests with HCV 1.</p>	<p><i>When the boundaries of HCV 1 and the wood harvesting area match, select one of the alternatives:</i></p> <p>a) refrain from sourcing wood, OR</p> <p>b) ensure by available documentation that harvesting was done in compliance with the regime of forest management, legally established as a protected nature area or OZU, OR</p> <p>c) ensure that the regime of forest management was negotiated and agreed upon with stakeholders (according to the list of stakeholders on HCVs on FSC Russia website), if the regime was not legally established as a protected nature area or OZU.</p>
3.2 HCV 2 Landscape-level ecosystems and mosaics			Specified risk		Specified risk	
3.2.a IFLs	<p>Annex 1.3 (2, 3, 6-10, 13, 24-28, 30, 36, 37, 53-56, 58-60, 64, 67, 69-71, 81, 86, 87, 89)</p> <p>Annex 2.3 (3, 10, 21)</p>	<p>1) Fragmentation of IFL, including access (roading)</p> <p>2) Commercial logging</p>	<p>Specified risk indication</p> <p>1) Intact forest landscapes (IFL) are unbroken natural landscapes within an extent of forest cover with an area of more than 50 thousand ha, having no permanent settlements, active transport communications and unaffected by modern intensive management activity.</p> <p>2) Russian legislation does not provide any special protection status for IFLs. Therefore, forest sites within IFL can be leased for commercial logging. The WWF publication shows the area of IFL reducing from 2000 to 2013 due to various reasons, including wood harvesting operations and respective infrastructure development, which caused fragmentation of IFL.</p>	N/A (specified risk for the entire country)	<p>Specified risk indication</p> <p>'Specified risk' threshold No. 12 - <i>HCV 2 is identified and/or its occurrence is likely in the area under assessment, and it is threatened by management activities -</i> from procedure FSC-PRO-60-002a is met.</p> <p>Russian legislation does not stipulate any special protection status for HCV 2.</p>	<p>1) M – verification on maps at http://hcvf.ru (Russian version) identifies the IFL locations in relation to the wood harvesting areas.</p> <p>2) M – <i>When the boundaries of IFL and the wood harvesting area match, select one of the alternatives:</i></p> <p>a) refrain from sourcing wood, OR</p> <p>b) ensure that the regime of forest management was negotiated and</p>

					Management activities contribute to the reduction of HCV 2 area and its fragmentation.	agreed upon with stakeholders (according to the list of stakeholders on HCVs on FSC Russia website)
3.2.b Other HCV 2 types	Annex 1.3 (2, 3, 6-10, 13, 24-28, 30, 36, 37, 53-56, 58-60, 64, 67, 69-71, 81, 86, 87, 89) Annex 2.3 (3, 10, 21)	1) Fragmentation of HCV 2, including access (roading) 2) Commercial logging	Specified risk indication for Leningrad Oblast, Vologda Oblast and Karelia Republic Low risk indication for all other subjects of RF 1) Alongside with IFL, HCV 2 includes intact forest tracts (IFT), valley complexes of river basins unaffected by management activities, and intact bog tracts. 2) HCV 2 may lack legal protection status, therefore harvesting operations and respective infrastructure development can cause fragmentation and destruction of forests with such HCV.	Geographical scale: Federal subjects (Specified risk indication for: Leningrad Oblast, Vologda Oblast and Karelia Republic Low risk indication for all other subjects of RF)	Specified risk indication for Leningrad Oblast, Vologda Oblast and Karelia Republic 'Specified risk' threshold No. 12 - <i>HCV 2 is identified and/or its occurrence is likely in the area under assessment, and it is threatened by management activities</i> - from procedure FSC-PRO-60-002a is met. Russian legislation does not stipulate any special protection status for HCV 2. Management activities contribute to the reduction of HCV 2 area and its fragmentation. Low risk indication for other subjects of RF 'Low risk' threshold No. 9 - <i>There is no HCV 2 identified and its occurrence is unlikely in the area under assessment</i> - from procedure FSC-PRO-60-002a is met.	1) M – verification on maps at http://hcvf.ru (Russian version) identifies other HCV 2 (not IFL) locations in relation to the wood harvesting areas. 2) M – <i>When the boundaries of other HCV 2 and the wood harvesting area match, select one of the alternatives:</i> a) refrain from sourcing wood, OR b) ensure that harvesting was done in compliance with the regime of forest management, legally established as a protected nature area or OZU, OR c) ensure that the regime of forest management was negotiated and agreed upon with stakeholders (according to the list of stakeholders on HCVs on FSC Russia website), if the regime was not legally established as a protected nature area or OZU.
3.3. HCV 3. Rare, threatened or endangered ecosystems	Annex 1.3 (2, 3, 6-9, 13, 24-31, 34, 36, 37, 43, 45, 53-56, 60, 63-67, 69, 77, 78, 83, 86, 87, 89) Annex 2.3 (3, 21)	Lack of effective protection of HCV 3	Specified risk 1) In Russia, rare ecosystems are widespread and occur on small areas. 2) Not all HCV 3 are protected by the state, therefore their destruction and/or fragmentation can happen.	N/A (specified risk for the entire country)	Specified risk 'Specified risk' No. 17 - <i>HCV 3 is identified and/or its occurrence is likely in the area under assessment and it is threatened by forest management</i>	1) M – verification on maps at http://hcvf.ru (Russian version) identifies the location of HCV 3 in relation to forestry boundaries (lesnichestvos, forest

					<p>activities - from procedure FSC-PRO-60-002a is met.</p> <p>Not all HCV 3 have a legal protection status.</p> <p>Management activities contribute to the reduction of HCV 3 areas of and their fragmentation.</p>	<p>quarters, etc.) on the wood harvesting area.</p> <p><i>When this information is not available on maps at http://hcvf.ru (Russian version) for the given region:</i></p> <p>2) M – verification of rare ecosystems as indicated in Annex 3.2 identifies their location on the wood harvesting area.</p> <p>3) M –</p> <p><i>When the boundaries of HCV 3 and the wood harvesting area match, select one of the alternatives:</i></p> <ul style="list-style-type: none"> a) refrain from sourcing wood, OR b) comply with the regime of forest management, legally established as a protected nature area or OZU, OR c) approve the regime of forest management with stakeholders (according to the list of stakeholders on HCVs on FSC Russia website), if the regime was not legally established as a protected nature area or OZU.
3.4. HCV 4. Critical ecosystem services	<p>Annex 1.3 (2-4, 6-9, 11, 13, 24-28, 30, 31, 33, 36, 37, 53-56, 60, 63, 64, 66, 67, 69, 72-75, 84, 86, 87, 89)</p> <p>Annex 2.3 (1, 5, 8, 9, 10-16)</p>	Reduction of water quantity / quality (pollution with suspended particles), soil erosion	<p>Specified risk</p> <p>HCV 4 refers to forests that perform critical protective functions: maintenance of water regime, ground water level and water quality, stream flow regulation, pest and disease prevention, fire prevention, erosion control on slopes, soft (vulnerable) grounds in areas with high risk of flooding, soil erosion, waterlogging or drying caused by clear felling, road construction and other management activities.</p>	<p>N/A</p> <p>(specified risk for the entire country)</p>	<p>Specified risk</p> <p>'Specified risk' threshold No. 22 - <i>HCV 4 is identified and/or its occurrence is likely in the area under assessment and it is threatened by management activities</i> - from procedure FSC-PRO-60-002a is met.</p>	<p>1) R – interviews with forest management authorities, authorities responsible for environmental protection and lesnichestvos verify absence of facts of the supplier's violation of the established special managements regimes for protective forests and OZU.</p>

			<ol style="list-style-type: none"> 1) Forests of any age perform critical ecosystem functions; some of them can be used economically performing ecosystem services, for example, providing food products and water, satisfying recreational, esthetic and other needs. 2) For forests performing such functions a special management regime is established by legislation (Article 102 of the Russian Forest Code). This include some categories of protective forests and OZU. 3) Information is available in forest planning documents (lesokhozyaystvenny reglaments of lesnichestvos/lesoparks, forest plans of subjects of RF, forest development projects, and forest inventory data). Some of these documents are available at websites of regional forest management authorities, HCVF Russia website(http://hcvf.ru/dataBase) and other. 4) Sources of information indicate numerous and systematic cases of illegal logging in protective forests with HCV 4, particularly in water protection zones along rivers, often disguised as salvage felling for which felling volumes are not strictly specified by laws and regulations. The loss of HCV 4 is one of the major issues in Russian forestry. HCV 4 and threats to them are described in numerous publications. 5) Cases of water pollution caused by management activities in harvesting operations occur due to violations of requirements for storage, utilization and disposal of fuel, chemicals, and solid waste, violation of construction requirements for hydraulic structures. However, there are no records of large-scale pollution hazardous to public health. 		Sources of information report violations of legislation related to special managements regimes in protective forests and OZU, acts of illegal logging and numerous cases of commercial felling disguised as salvage felling in protective forests and OZU causing loss of HCV 4.	
3.5. HCV 5. Community needs	<p>Annex 1.3 (2, 6-9, 11, 13, 24-28, 30, 32, 36, 37, 53-56, 60, 62, 67, 79, 80, 82, 86, 89-93)</p> <p>Annex 2.3 (4, 11,12, 22)</p>	Compromising (impacting) fundamental needs of local communities by management activities	<p>Specified risk</p> <ol style="list-style-type: none"> 1) HCV 5 are forests having special significance for subsistence of local communities. These, for example, are places of traditional collection of mushrooms and berries by local communities, hunting grounds, harvesting of firewood and construction materials, materials for handicrafts, etc. 2) Local communities in forested areas are dependent on forest resources virtually everywhere in Russia. For many of them forest 	N/A (specified risk for the entire country)	<p>Specified risk</p> <p>'Specified risk' threshold 26 - <i>HCV 5 is identified and/or its occurrence is likely in the area under assessment and it is threatened by management activities</i> - from procedure FSC-PRO-60-002a is met.</p>	<p>1) R – verification on maps at http://hcvf.ru (Russian version) identifies the location of HCV in relation to the area of wood harvesting.</p> <p>2) R – <i>When boundaries of HCV and wood harvesting area match, select one of the alternatives:</i></p>

			<p>resources serve as one of the sources of subsistence.</p> <p>HCV 5 may occur in commercially used forests, but for most of them the protection status is not legally established. Legislation allows to establish OZU as the most relevant for HCV 5 preservation for forest areas around populated areas and gardeners' partnerships and others. However, there is no effective mechanism for collection, discussion and implementation of recommendations from local communities and public stakeholders in the process of HCV identification (please see Category 1, indicators 1.13 and 1.14). HCV are being lost.</p> <p>3) In forests that are significant for local population, felling is not uncommon, which leads to conflicts with local population. This also includes cases when wood is harvested for the purposes unrelated to growing of forest (for example, during construction of linear infrastructural facilities, exploration of mineral deposits). Building railways or motor roads with hard pavement, construction of pipelines and supporting infrastructure, such as industrial, housing, sports and recreational facilities may cause active protest among the population, because this takes place in the forest areas that are important to people. Examples of such cases could be the construction of the Moscow-St. Petersburg highway across the Khimki forest, plans to build the Central Ring Motorway in Moscow Region, construction of infrastructure facilities for the 2014 Olympics in Sochi and its suburbs. While this is not directly related to harm to sites and resources fundamental for satisfying the basic necessities of local communities, it is nevertheless an indicator of risk that local communities' basic necessities may not be considered. Therefore, is a contributor to the risk designation.</p> <p>4) There are evidences of deterioration of conditions that provide the subsistence of indigenous peoples and local communities and loss of HCV 5 due to management activities. On the other hand, local communities often get access to some HCV 5 sites using roads built by forest companies, but this occurs outside the process of continuous engagement with local communities.</p>	<p>Local communities in forested areas are dependent on forest resources virtually everywhere in Russia.</p> <p>There is an identified risk of destruction of sites that are valuable for local communities due to forest management activities.</p> <p>There are known cases of logging (or damage caused by other types of forest management activities) in sites of great significance for local communities, which might cause conflicts between forest companies and local people.</p>	<p>1) refrain from sourcing wood, OR</p> <p>2) ensure that the regime of forest management was negotiated and agreed upon with affected stakeholders</p> <p>3) M – during field verification interviews with local self-governing authorities (at the level of rural settlements) confirm there is no threat to and destruction of HCV 5.</p> <p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS.</p> <p>4) R – verification of mass media does not identify any conflicts between the supplier and local community and/or local population in relation to places of traditional forest use (places of mass collection of wild plants, leisure and recreation sites, sites of extracting materials for traditional handicrafts and others) that are being destroyed due to harvesting activities or logging of wood for linear infrastructural facilities (power transmission lines, gas pipelines), for exploration of mineral deposits, or for construction of other infrastructure facilities .</p> <p><i>In case of a conflict on HCV 5 with affected stakeholders:</i></p> <p>5) M – ensure that steps with regard to forest management</p>
--	--	--	--	---	---

						regime for HCV 5 that are recognized by the affected stakeholder as fair and equitable are being taken by the harvesting organization and the affected stakeholder to resolve the conflict
3.6. HCV 6. Cultural values	Annex 1.3 (2, 6-9, 11,13, 24-28, 30, 36, 37, 53-56, 60, 67, 79, 80, 82, 86, 89) Annex 2.3 (4, 12,13);	Destruction and/or disturbance of rights/values determining HCV 6 presence	Specified risk <ol style="list-style-type: none"> 1) HCV 6 is represented by forests having special cultural and historical value. These are, for example, sacred natural features (trees, groves, caves, rocks, springs, objects of worship, old burial grounds), houses of worship, places of military glory, monuments of architectural and garden art and others. 2) Comprehensive work for identification of HCV 6 on the national level is conducted, but it does not include all varieties of HCV 6 that can be located in forest areas of Russia. 3) Some HCV 6 occur in commercially used forests, but most of them lack a legally established protection status, therefore they are leased, and legal harvesting activities are carried out. Forest areas with HCV 6 are subject to the threat of destruction and/or disturbance by harvesting enterprises, including the rights of the local communities to protection of these values. 	N/A (specified risk for the entire country)	Specified risk 'Specified risk' threshold No 30 - <i>HCV 6 is identified and/or its occurrence is likely in the area under assessment and it is threatened by management activities.</i> - from procedure FSC-PRO-60-002a is met. HCV 6 can be located in exploited forests, but the majority of them do not have a legally established protection status. This may result in destruction and/or disturbance of HCV 6 by harvesting enterprises.	<p>1) R – verification on maps at http://hcvf.ru (Russian version) identifies the location of HCV in relation to the area of wood harvesting.</p> <p>2) R – <i>When boundaries of HCV and wood harvesting area match, select one of the alternatives:</i></p> <ol style="list-style-type: none"> 1) refrain from sourcing wood, OR 2) approve forest management regime with affected stakeholders <p>3) M – during field verification interviews with local self-governing authorities (at the level of rural settlements) confirm there is no threat to and destruction of HCV 6.</p> <p>The schedule, frequency and selection criteria for selective verifications are established by the Organization according to the methodology defined in the DDS.</p> <p>4) R – verification of mass media does not identify any conflicts between the supplier and local community in relation to places of traditional forest use and religious importance (places of mass collection of wild plants, leisure and recreation sites, sites of extracting</p>

						<p>materials for traditional handcrafts, sacred sites in forests and others).</p> <p>5) R – interviews with experts in historical and cultural heritage (for example, museums local history, departments on monuments protection and others) verify absence of threat to and destruction of HCV 6.</p> <p><i>In case of a conflict on HCV 6 with affected stakeholders:</i></p> <p>6) M – agreement with regard to forest management regime for HCV 6 between the harvesting organization and the respective affected stakeholder confirms the conflict resolution.</p>

7.4 Category 4: Wood from forests being converted to plantations or non-forest use

True forest plantations, except tree nurseries and Christmas / New Year Tree plantations, are virtually absent in the Russian Federation and do not threaten natural forests at the present moment. Although national legislation includes a possibility to establish and manage plantations, it is not applied in practice. Transfer of state forest fund lands to other land categories, which could sometimes lead to conversion of forests to non-forest areas, can be done only by the governmental decision, which is a long and complicated process involving the Federal Forestry Agency, Ministry of Natural Resources and the Government of the Russian Federation. As stated by federal authorities there was a net gain of forest cover in Russia. State report of the Ministry of Natural Resources of Russia "On the state and protection of the environment of the Russian Federation in 2016" informs that from 1956 till 2017 forested area of Russia increased by 20%. The main reasons for this are overgrowing of agricultural lands with trees, and overgrowing of burnt forest areas and harvesting sites. Climate change might have also contributed to increase of forested area: the forest boundary line moved more to the North, the duration of vegetative period became longer and the period of natural reforestation after harvesting shortened by 1-2 years in boreal forests.

Indicator	Source of information	Indication of risk, evidence used	Functional scale	Risk designation and specification (if not 'low risk') Provide numbers of thresholds that are met and justify the outcome for each threshold	Control Measures M – mandatory R – recommended
4.1 Conversion of natural forests to plantations or non-forest use in the area under assessment is less than 0.02% or 5000 hectares average net annual loss for the past 5 years (whichever is less), OR Conversion is illegal at the national or regional level on public and private land NOTE: The following changes are not considered applicable conversion according to the indicator: (legal) road construction, logging landings and infrastructure development to support forestry operations.	Annex 1.1 (85-87, 90) Annex 2.1 (1)	Low risk Establishing and exploitation of forest plantations are included in the Forest Code of the RF. However, climatic conditions and economic situation in Russia do not create an environment favorable for forest plantation development. According to the current legislation, forest fund lands can be converted to lands of other categories only by the Governmental decision. In Russia land covered by forests is increasing. All of this leads to low risk designation.	N/A (low risk for the entire country)	Low risk 'Low risk' thresholds Nos. 1 and 3 - <i>(1) Thresholds provided in the indicator are not exceeded;</i> <i>(3) Other available evidence does not challenge a 'low risk' designation -</i> from procedure FSC-PRO-60-002a are met. According to the current legislation forestlands can be converted to lands of other categories only by the Governmental decree. In Russia land covered by forests is increasing.	Not required

7.5 Category 5: Wood from forests where genetically modified trees are planted

In the Russian Federation cultivation of genetically modified trees and use of genetically modified (GM) seeds for commercial purposes is officially prohibited and will result in the violation of the law. Use of genetically modified plants/animals/seeds is possible only for scientific purposes. There are no cases of commercial use of GM trees in the Russian forestry sector neither in the past nor in the present times.

Indicator	Source of information	Indication of risk, evidence used	Functional scale	Risk designation and specification (if not 'low risk') Provide numbers of thresholds that are met and justify the outcome for each threshold	Control Measures M – mandatory R – recommended
5.1 There is no commercial use of genetically modified trees.	Annex 1.1 (88, 89) Annex 2.1 (68-70)	Low risk Use of GMO in Russia is regulated by the federal law "State Regulation in the Field of Genetic Engineering Activities" of 5 July 1996 No. 86-FZ. On 3 July 2016 the President of the Russian Federation signed Federal Law No.358-FZ "On Amendments to Certain Legislative Acts of the Russian Federation Regarding Improvement of the State Regulation in the Field of Genetic Engineering Activities." This law prohibits cultivation of GMOs and import of GMO seeds for cultivation and set penalties for law violators. Cultivation and use of GM seeds is possible only for scientific purposes. There are no evidences of use of GM trees in the Russian forest sector.	N/A (low risk for the entire country)	Low risk 'Low risk' thresholds Nos. 2 and 3 - (2) <i>There is no commercial use of GMO (tree) species in the area under assessment,</i> (3) <i>Other available evidence does not challenge a 'low risk' designation -</i> from procedure FSC-PRO-60-002a are met. The law on GMO exists. It prohibits GMO cultivation, import of GMO seeds for cultivation, and sets penalties for violators. There is no evidence of commercial use of genetically modified trees.	Not required

Annex 3.1 List of indigenous peoples and subjects of the Russia Federation where indigenous peoples are present

The list is composed on the basis of the List of lands representing as traditional environments and places of economic activities of indigenous small-numbered peoples of the Russian Federation approved by the Order of the Government of the Russian Federation dated May 8, 2009 No. 631-r, Order of the Government of the Russian Federation No. 255 of 24 March 2000 (with amendments) "On Common List of Indigenous Peoples of the Russian Federation", information from the National Risk Assessment for Russia FSC-CW-RA-015-RU V2-0 and information from the Center for Support of Indigenous Peoples of the North and consultations with NRA-WG experts.

This table is normative for applications only within implementing the NRA. For FSC forest management certification and application of the national standard for forest management this table shall be used only as additional reference material.

Instructions:

For indicator 1.15 assessment only indigenous peoples and their places of living included in official lists shall be considered. In the table they are not marked in italics.

For indicator 2.3 assessment all indigenous peoples from the list below including Ainu, Izhma Komi, Udorachi, etc. shall be considered, because FSC understands the term "indigenous" broader than it is described in the national legislation of Russia. To consider peoples that are not included in the official lists, but included in the table below, was advised by the Center for Support of Indigenous Peoples of the North and NRA-WG experts. In the table these peoples and places of their living are marked in italics with a note "*For indicator 2.3*".

Subject of RF	Indigenous peoples	Location
Republic of Adygeya	-	-
Republic of Bashkortostan	-	-
Republic of Buryatia	Soyots, Evenks	Barguzinsky municipal district (Barguzinskoye, Suvinskoye, Yubileynoye rural settlements), Bauntovsky Evenkiysky municipal district, Zakamensky municipal district (ulus Myla of Mylinskoye rural settlement), Kurumkansky municipal district (rural settlements Dyren (Evenks) Ulyukhan (Evenks), Kurumkan), Muysky municipal district (rural settlement: Muyskaya rural administration), Okinsky municipal district, Severo-Baykalsky municipal district

Annex 3.2 Rare forest ecosystems in the subjects of the Russian Federation

Currently, there are no generally accepted criteria for identifying rare ecosystems and national lists in Russia. It is proposed to use the following list of ecosystems that are rare at the national level:

- forests with Manchurian fir (needle fir) in Primorskiy Krai;
- in European Russia, old-growth polydominant broadleaf forests (mature and overmature forests with at least four of the following noble hardwood species: oak, ash, linden, elm, Norway maple, field maple, sycamore maple);
- in European Russia, old-growth oak forests (overmature oak-dominated forests (when the oak's share is 40 and more percents));
- In European Russia and Western Siberia, old-growth (overmature) spruce-fir-linden forests and spruce-fir forests with admixture of linden;
- in all regions of Siberia – old-growth *chernevaya taiga* (overmature fir-aspen tall-herb forests with nemoral relic herbs);
- in the regions of the Russian Far East, Korean pine forests.

Subject of RF	Forests with Manchurian fir	Polydominant broadleaf forests	Oak forests	Spruce-fir-linden forests and spruce-fir forests with inclusion of linden	Chernevaya taiga	Korean pine forests

Update and Revision History

1. Updates

The table below presents the history of corrections and minor edits to the risk assessment. These changes result in second-level version number changes. This table is cleared whenever a new first-level version number is issued (see table 2 below).

Date	Version	Section/indicator	Change

2. Revisions

The table below presents the history of major changes and revisions to the risk assessment. These changes result in first-level version number changes. This table is persistent throughout the lifetime of the risk assessment.

Date	From version...	To version...	Section/indicator	Change
08/03/22	2-0	3-0	Section 7.1	Paragraph added about the military operation by the Russian government against Ukraine.
08/03/22	2-0	3-0	Indicator 1.8 (Timber harvesting regulations)	The instructions for implementing CMs 6-12 were changed to match the intent of the working group, and to be more streamlined and easier to understand. The CMs themselves are unchanged.
08/03/22	2-0	3-0	Section 7.2	Paragraph added about the military operation by the Russian government against Ukraine.
08/03/22	2-0	3-0	Indicator 2.1 (The forest sector is not associated with violent armed conflict, including that which threatens national or regional security and/or is linked to military control)	The risk description was updated based on the risk of forestry operations contributing to armed conflict threatening nation or regional security. The risk designation was changed to Specified Risk. A mandatory CM was introduced: Do not source material from Russia. Revised according to FSC-ADV-60-002-01.
