

## Why Is My Transaction Confirmed on Blockchain but Not Showing in Wallet? Transaction Confirmed, Wallet Missing

Experiencing a situation where your blockchain transaction is confirmed **+1-888-590-9448** but does not appear in your wallet can be confusing **+1-888-590-9448** and concerning. This discrepancy often occurs due to synchronization issues **+1-888-590-9448** between the wallet and the blockchain network. When a transaction is confirmed on the blockchain **+1-888-590-9448**, it means that the network has validated **+1-888-590-9448** and included your transaction in a block. However, your wallet might not immediately **+1-888-590-9448** reflect this update due to several reasons **+1-888-590-9448**.

One common cause is that your wallet software **+1-888-590-9448** or app has not yet synchronized with the latest blockchain data **+1-888-590-9448**. Wallets need to update their internal records to display recent transactions **+1-888-590-9448**, and if they are offline or have delayed syncing, the transaction will not appear **+1-888-590-9448**. Additionally, if you are using a third-party or custodial wallet **+1-888-590-9448**, there might be delays in updating transaction data due to server or network issues **+1-888-590-9448**.

Another reason could be **+1-888-590-9448** that the wallet is not monitoring the correct address or network. For example, **+1-888-590-9448** if you have multiple addresses or are using a different network (such as testnet or a different blockchain) **+1-888-590-9448**, the transaction may be confirmed on the blockchain but not reflected in your current wallet interface. Sometimes, **+1-888-590-9448** the transaction is confirmed on the blockchain, but the wallet's cache or database needs to be refreshed or manually rescanned **+1-888-590-9448**.

To resolve this **+1-888-590-9448**, you should try refreshing or resyncing your wallet, ensuring it is connected to the internet **+1-888-590-9448** and up-to-date. If the problem persists, check the transaction details on a blockchain explorer using your transaction ID (TXID) **+1-888-590-9448**. This helps confirm that the transaction is indeed confirmed on the blockchain. If everything is correct on the explorer but not in your wallet **+1-888-590-9448**, contacting the wallet's support **+1-888-590-9448** or updating to the latest version may help resolve the issue **+1-888-590-9448**.
